

Streamlining IT Procurement

Standard Laptop Procurement Automation using Flow Designer

Phase 3 – Project Design

Purpose: Design the workflow, data flow, request structure, and automation logic for the Standard Laptop Procurement Automation project before implementation.

Section	Project-Specific Details
Workflow Design	Standard Laptop request submission → validation → approval → automatic creation of a Catalog Task → assignment to the Hardware group → fulfillment → completion.
Data Design	Capture requester details, laptop type, quantity, justification, approval status, and fulfillment status. The workflow uses the request information to continue the procurement process.
Flow Design	Use ServiceNow Flow Designer to trigger actions when a Standard Laptop request is submitted and approved. The flow creates the required Catalog Task, assigns it to the Hardware group, updates the task details, and sets Approval to Approved .
Task Configuration	For an approved Standard Laptop request, create a Catalog Task with the short description/description: “ Laptop need to Configured ”, and assign the task to the Hardware group for fulfillment.
Interface Design	Provide a simple Standard Laptop request form with clear fields for the requester, laptop type, quantity, justification, and request/approval status.

Project Note: This Phase 3 document is prepared as evidence for the TN Skills project. It documents the project-specific workflow, data design, Flow Designer automation, task configuration, and interface design for Standard Laptop Procurement Automation.
