

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Phase 4 – Development / Implementation

Purpose: Implement the designed procurement automation using the selected platform and Flow Designer.

Section	Project-Specific Details
Platform Setup	Configure the required ServiceNow application, tables, forms, users, and roles needed to support the Standard Laptop Procurement process.
Request Configuration	Create the Standard Laptop request form with the required fields such as requester details, laptop type, quantity, justification, approval status, and fulfillment status.
Flow Configuration	Configure Flow Designer with the request trigger, validation conditions, approval steps, Catalog Task creation, Hardware group assignment, notifications, and completion actions.
Task Implementation	When the Standard Laptop request is approved, automatically create a Catalog Task with “ Laptop need to Configured ” as the task description and assign it to the Hardware group.
Implementation Result	The configured workflow processes Standard Laptop requests through defined automated stages, from request submission and approval to task creation, assignment, and fulfillment completion.

Project Note: This Phase 4 document is prepared for organizing the TN Skills project evidence and can be supplemented with actual screenshots and configuration details.
