

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Name: Ashmi J

Phase 2 - Requirement Analysis

Purpose: Identify the functional and non-functional requirements of the Standard Laptop procurement automation project implemented in ServiceNow.

Section	Details
Functional Requirements	The system shall allow a user to place a Standard Laptop request through the Service Catalog, capture the requested item, route the request for approval, and trigger the Flow Designer process. After approval, the flow shall create a Catalog Task with the short description " Laptop need to Configured ", set the description to the same value, assign the task to the Hardware group, and record the approval as Approved .
User Requirements	Users should be able to open Service Catalog > Hardware , select Standard Laptop , and use Order Now to submit a request. Users should be able to view the request number, approval status, requested item, and resulting Catalog Task.
Admin Requirements	Administrators should be able to create and maintain the Standard laptop task flow in Flow Designer, use Service Catalog as the trigger, configure the Create Catalog Task action, assign the flow to the Standard Laptop catalog item through Maintain Items , manage approvals, and monitor Catalog Tasks and request status.
Non-Functional Requirements	The procurement automation process should be reliable, easy to use, maintainable, and provide clear status visibility. The workflow should reduce manual task creation and support consistent assignment of approved laptop configuration work to the Hardware team.

Project Note: This phase document is prepared for organizing the TN Skills project evidence and is customized to the Standard Laptop procurement automation workflow carried out in ServiceNow. Actual screenshots/configuration details can be added as project evidence.
