

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Project Title	Streamlining IT Procurement
Project Name	Automating Standard Laptop Orders with Flow Designer
Prepared By	Ashmi J
Platform	ServiceNow
Documentation Phase	Phase 6 – Documentation

1. Project Documentation

Purpose: Prepare technical and user documentation for the completed project.

Objective

The project automates the Standard Laptop service catalog request process in ServiceNow using Flow Designer. After the request is approved, the configured flow creates a Catalog Task and assigns it to the Hardware assignment group.

Requirements

- Standard Laptop service catalog item
- Service Catalog request and approval process
- Flow Designer automation
- Create Catalog Task action
- Hardware assignment group
- Approved request condition

Design

The solution uses a Flow Designer flow named Standard laptop task. The flow runs as the System user, uses the Service Catalog trigger, and creates a Catalog Task using the Requested Item Record.

2. Configuration Documentation

Flow Designer Configuration

Component	Configuration
Flow Name	Standard laptop task
Application	Global
Run As	System user
Trigger	Service Catalog
Action	Create Catalog Task
Request Item	Requested Item Record
Table	Catalog Task
Short Description	Laptop need to Configured
Description	Laptop need to Configured
Assignment Group	Hardware
Approval	Approved

Catalog Item Assignment

The Standard Laptop catalog item is configured through Maintain Items. Under Process Engine, the existing automation is replaced with the Standard Laptop Task Flow.

3. Implementation

The implementation follows these steps:

- Open ServiceNow and navigate to Flow Designer.
- Create a new Flow named Standard laptop task.
- Set Application to Global and Run As to System user.
- Configure the Service Catalog trigger.
- Add the Create Catalog Task action.
- Map the Requested Item Record to the Request item field.
- Configure the Short Description, Description, Assignment Group, and Approval values.
- Save and activate the Flow.
- Open Maintain Items and select the Standard Laptop catalog item.
- Under Process Engine, assign the Standard Laptop Task Flow.
- Place a Standard Laptop order through Service Catalog.
- Approve the request and verify the generated Catalog Task.

4. Testing and Results

Testing verifies request creation, field validation, flow triggering, approvals, task generation, and completion.

Scenario	Expected Result
Positive Test	A valid laptop request moves through the expected workflow stages and creates the Catalog Task after approval.
Approval Verification	The requested item is approved and the Catalog Task is generated.
Task Verification	The Catalog Task shows the configured short description and Hardware assignment group.
Negative Test	Incomplete or invalid information is prevented from incorrect processing by validation.

5. User Guide

How to Submit a Standard Laptop Request

- Open Service Catalog in ServiceNow.
- Navigate to Hardware and select Standard Laptop.
- Click Order Now to submit the request.
- Open the generated Request Number to view the request status.
- Review the Approvers section and approve the request when required.
- Open the Requested Item record.
- Scroll to the Catalog Tasks section.
- Open the generated task and verify its status, Short Description, and Assignment Group.

6. Evidence / Screenshots

The documentation should include relevant screenshots for the following evidence:

- Flow Designer – Standard laptop task Flow properties.
- Service Catalog trigger configuration.
- Create Catalog Task action configuration.
- Short Description, Description, Assignment Group, and Approval field values.
- Flow activation screen.
- Standard Laptop catalog item – Process Engine configuration.
- Service Catalog – Standard Laptop order screen.
- Request and approval record.
- Requested Item – Catalog Tasks section.
- Completed Catalog Task showing the configured values.

Project Note: This Phase 6 documentation is prepared for organizing the TN Skills project evidence and can be supplemented with actual screenshots and configuration details.
