

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Project Title	Streamlining IT Procurement
Project	Automating Standard Laptop Orders with Flow Designer
Prepared By	Ashmi J
Platform	ServiceNow
Phase	Phase 7 - Deployment

Phase 7 - Deployment

Purpose: Prepare the completed solution for use in the intended environment.

1. Deployment Preparation

Verify the configuration, roles, workflow logic, test results, and required data before deployment.

Deployment Checklist

- Verify the Standard laptop task Flow configuration.
- Confirm the Service Catalog trigger and Create Catalog Task action are configured correctly.
- Verify the Standard Laptop catalog item is associated with the required Flow.
- Check required roles and access before deployment.
- Review workflow logic and approval configuration.
- Review the completed testing results before release.

2. Release

Move or publish the completed configuration according to the requirements of the project environment.

Release Activities

- Prepare the completed ServiceNow configuration for the intended environment.
- Move or publish the completed Flow and related catalog configuration according to the environment requirements.
- Ensure the Standard Laptop service catalog item uses the deployed Flow.
- Confirm that the configuration is available in the intended environment.

3. Verification

Perform a final request and confirm that automation, approvals, tasks, and notifications operate correctly.

Final Verification Steps

- Submit a Standard Laptop request through Service Catalog.
- Confirm that the request is created successfully.
- Verify that the approval process operates correctly.
- Approve the request and confirm that the automation is triggered.
- Verify that the Catalog Task is created.
- Confirm that the task contains the configured Short Description and Hardware assignment group.
- Verify that the overall request and task process operates correctly.

4. Maintenance

Monitor the workflow and update configurations when procurement requirements change.

Maintenance Activities

- Monitor the Standard Laptop request workflow after deployment.
- Check the Flow and Catalog Task behavior periodically.
- Update Flow configuration when procurement requirements change.
- Update the Standard Laptop catalog configuration when required.
- Review approval and assignment requirements when business requirements change.
- Repeat verification after significant configuration changes.

5. Deployment Summary

The Standard Laptop procurement automation is prepared for deployment by verifying configuration, workflow logic, roles, test results, and required data. The completed configuration can then be released according to the project environment requirements, followed by final verification and ongoing maintenance.

Project Note: This Phase 7 document is prepared for organizing the TN Skills project evidence and can be supplemented with actual screenshots/configuration details.
