

Streamlining IT Procurement

Automating Standard Laptop Orders with Flow Designer

Phase 1 - Brainstorming & Ideation

Purpose: Define the project idea, identify the procurement problem, and propose an automated solution based on the Standard Laptop ServiceNow workflow.

Section	Details
Project Idea	Automate Standard Laptop procurement requests in ServiceNow using Flow Designer . The flow creates a Catalog Task after approval and assigns the task to the Hardware team.
Problem Identified	Manual laptop procurement can require repeated task creation and assignment. This may cause delays, inconsistent handling, reduced visibility, and manual errors.
Proposed Solution	Create a standardized ServiceNow workflow connecting the Service Catalog, Requested Items, Approvals, Flow Designer, and Catalog Tasks . Create the flow as Standard laptop task , use Service Catalog as the trigger, and use Create Catalog Task as the action. Set the short description and description to Laptop need to Configured , assignment group to Hardware , and approval to Approved .
Implementation Steps	1. Open Flow Designer and create the flow Standard laptop task in Global application with Run user as System user. 2. Add the Service Catalog trigger. 3. Add Create Catalog Task, map the Requested Item Record, and configure the required fields. 4. Save and activate the flow. 5. Open Maintain Items, select Standard Laptop, remove remaining process-engine automations, add the created flow, and save. 6. Place a Standard Laptop order from Service Catalog > Hardware. 7. Open the request, approve it from the Approvers section, and verify the Catalog Tasks record.
Expected Outcome	A consistent and traceable laptop-order workflow where an approved Standard Laptop request automatically produces a Catalog Task for the Hardware group, improving task visibility and reducing manual processing effort.

Project Note: This Phase 1 document follows the structure of the provided Brainstorming & Ideation PDF and records the Standard Laptop procurement automation instructions supplied for the project. Actual ServiceNow screenshots/configuration evidence can be added later.
